"BUY" A BETTER CORN CROP FOR $\frac{3}{10}$ ¢ AN ACRE!

Semesan Jr. dry treatment of hybrid or open-pollinated FIELD, SWEET or POP corn seed helps reduce seed rotting; improves stands and sturdiness of corn seedlings; generally increases yields —an actual average of 4 bushels an acre in 9-year tests. It pays to use Semesan Jr.!

DOUBLE ACTION

Disinfecting Vapor—plus
Protecting Film

Immediate Action—When Semesan Jr. is applied to seed corn, part of the active ingredient slowly changes to a gas or vapor. This vapor is highly effective in killing the germs and spores in every crack and cranny on the seed coat, but relatively harmless to the seed itself. This disinfecting action begins at once after the seed is treated.

Long-Lasting Protection—Another part of the active ingredient of Semesan Jr. dissolves and is taken up or adsorbed by the seed coat. It rapidly forms on the seed a protective film—an armor-plate against soil-borne organisms—which cannot be removed by rains or any other natural means. Seed treated with Semesan Jr. keeps this protective coating almost indefinitely.

CORN DISEASE ORGANISMS that cause seed rotting, missing hills and reduced yields may lie in wait on the seed you plant. Harmful fungi (molds) such as *Diplodia* and *Gibberella* are often present on the seed and in the soil. They attack the unprotected seed, and weaken or stunt the seedling.

The four decaying kernels on the right mean missing hills.

TREAT YOUR SEED CORN—To check seed rotting and certain seed-borne diseases, experiment stations and the United States Department of Agriculture recommend treatment of seed corn with an ethyl mercury phosphate dry disinfectant such as Semesan Jr.

MAKES EARLY PLANTING SAFER—

This low-cost treatment kills most harmful organisms on the seed coat, and helps protect it from decay by soil-borne organisms. Treating seed with Semesan Jr. may save replanting, especially in a cold wet spring.

Semesan Jr. increases stands from diseased seed.

Cold, wet weather at planting time cannot now be forecast. Seed treatment with Semesan Jr. is inexpensive insurance against many seedling diseases and seed rotting which cause missing hills and hills with only one stalk. Fifty-one farm demonstrations in the Corn Belt extending over 3 years showed that Semesan Jr. increased stands 5 to 15%.

The U. S. Dept. of Agriculture says: "... treatments usually improve stands and yields of field and sweet corn. ..."

HIGHER YIELDS

are often secured with Semesan Jr. In 9 years' tests by the Iowa Experiment Station, treatment increased the yield an average of 4.0 bushels per acre. The Illinois Station reported an average increase in yield of about 3 bushels an acre. Under similar conditions Semesan Jr. may help add 4 extra bushels to your acre yield —and you can "buy" this increase for only 9/10¢ an acre!

EVERYTHING YOU WANT IN A SEED CORN TREATMENT!

Treat when Convenient—Dry seed to be stored in a dry building may be treated as directed with Semesan Jr. at any convenient time.

No Clogging in Planter—Semesan Jr. does not reduce the planting rate.

Practically Dustless—Semesan Jr. is practically dustless—little flying dust during treating and none during planting.

Safe on Seed—Semesan Jr. when properly applied is harmless to seed. Years of use prove this!

Low Cost—One pound of Semesan Jr. treats 10.7 bushels of seed at a cost of 75¢—only 9/10¢ an acre!

Easy to Apply—Mix the correct amount of dry Semesan Jr. and seed in a suitable container (see last page). For large quantities use a power treater.
